"This volume of measurement instruments in the English language arts is the second one produced by the Research Instruments Project (TRIP), which was designed to collect and evaluate research instruments in language arts, language and language development, literacy, literature, oral language, reading, teacher knowledge/attitudes, and writing. The 160 measurement instruments are arranged alphabetically by category; within each category, measures are listed alphabetically by author. All instruments are cross-referenced by author. The age range indicated is the specific age grouping as stated by the authors or the age of the sample to whom the instrument was administered. The description of the instrument provides the purpose of the instrument, the date of construction, and a physical description of the instrument—often including sample items and administration data (directions, time, scoring procedures, and so forth). The lack of reliability and validity data for instruments is indicated when the information was unavailable. In the case of tables of difficulty, indexes, and so on, the data contained are summarized and the complete data are made available with the test or references cited. The March of medicine through Wisconsin is a fascinating story, full of triumph and failure, heroes and quacks, and -- overriding all -- stuttering steps toward a modern system of health care that has witnessed the doubling of life expectancies among Wisconsin citizens. This is the story of medicine in Wisconsin, told by professional historians, each speaking from his or her area of specialty. Since territorial times, the physician has risen from a position of marginal respectability to one of unparalleled admiration and trust. The hospital, unknown to residents just 150 years ago, has become a symbol of modern science and a source of civic pride. Knowledge of disease has revolutionized health practices. The purpose of this book is not to celebrate the achievements of Wisconsin's physicians, notable as they have been, but to look critically and sympathetically at the state's medical record. The contributors make no exaggerated claims for Wisconsin. Occasionally, the state led the nation in health matters, but more often it followed the example of others. With this book, the reader will come to understand how and why Wisconsin's medical practice evolved. - Jacket flap.

If you’re a security or network professional, you already know the “do’s and don’ts”: run AV software and firewalls, lock down your systems, use encryption, watch network traffic, follow best practices, hire expensive consultants . . . but it isn’t working. You’re at greater risk than ever, and even the world’s most security-focused organizations are being victimized by massive attacks. In Thinking Security, author Steven M. Bellovin provides a new way to think about security. As one of the world’s most respected security experts, Bellovin helps you gain new clarity about what you’re doing and why you’re doing it. He helps you understand security as a systems problem, including the role of the all-important human element, and shows you how to match your countermeasures to actual threats. You’ll learn how to move beyond last year’s checklists at a time when technology is changing so rapidly. You’ll also understand how to design security architectures that don’t just prevent attacks wherever possible, but also deal with the consequences of failures. And, within the context of your coherent architecture, you’ll learn how to decide when to invest in a new security product and when not to. Bellovin, co-author of the best-selling Firewalls and Internet Security, caught his first hackers in 1971. Drawing on his deep experience, he shares actionable, up-to-date guidance on issues ranging from SSO and federated authentication to BYOD, virtualization, and cloud security. Perfect security is impossible. Nevertheless, it’s possible to build and operate security systems far more effectively. Thinking Security will help you do just that.

In an age of skepticism and disenchantment, people long for something that satisfies our mind's search for truth and our heart's desire for beauty and meaning. Stand Firm: Apologetics and the Brilliance of the Gospel argues that the gospel satisfies both of these needs. It is true and rational, but it is also inherently attractive and provides meaning and purpose. In short, the gospel is brilliant. It is brilliant, in one sense, because of the broad variety of evidences for its truth. But it is also brilliant given its beauty, goodness and the meaningful life it offers. The book provides up to date responses to questions about the existence of God, the reliability of the Bible, Jesus and the resurrection, and the problem of evil. It also treats unique topics such as understanding truth, knowledge and faith, the claims of alternate faiths, religious disagreement, etc. Each chapter attempts to connect these considerations with the gospel so that we may stand firm in our faith.

Women brewed and sold most of the ale consumed in medieval England, but after 1350, men slowly took over the trade. By 1600, most brewers in London were male, and men also dominated the trade in many towns and villages. This book asks how, when, and why brewing ceased to be women's work and instead became a job for men. Employing a wide variety of sources and methods, Bennett vividly describes how brewsters (that is, female brewers) gradually left the trade. She also offers a compelling account of the endurance of patriarchy during this time of dramatic change.

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." —an excerpt

"Staff from smaller airports typically lack specialized expertise in the negotiation and development of airport property or the resources to hire consultants. There are many factors that can go into the analysis, and this report reviews best practices in property development."—Foreword.
